Paper No./Mail Date \_\_\_\_\_.
7. ☐ Examiner's Amendment/Comment
8. ☒ Examiner's Statement of Reasons for Allowance
9. ☐ Other \_\_\_\_\_.

***Reasons For Allowance***

1. The combination or method as claimed wherein a contact sensitive device comprising calculating a location of a contact on the member by calculating a phase angle for each measured bending wave signal and a phase difference between the phase angles of least two pairs of sensors (claims 1, 26, 39) is not disclosed, suggested, or made obvious by the prior art of record.

Sullivan (US 2004/0160421) discloses a contact sensitive member (10) for calculating dispersion corrected functions, including phase equivalent functions, of two measured bending wave signals to determine contact relating information (Abstract). However, Sullivan does not disclose that calculating a location of a contact on the member is determined by calculating a phase angle for each measured bending wave signal and a phase difference between the phase angles of least two pairs of sensors.

Likewise, Hill (US 2001/0006006) discloses a contact sensitive member (10) for determining contact relating information (Abstract, lines 1-3). However, Hill does not disclose calculating phase angles of wave signals and phase differences between the signals.
